

# Lice Repellant™

## About Lice Repellant

Once head lice get into a community they can spread like wildfire, they keep coming back and are so hard to get rid of! Why...because it's nearly IMPOSSIBLE for every family to get rid of every nit off every child's head. This is why we created Licekiller Lice Repellant.

Our **EXCLUSIVE LICE REPELLANT** uses pure coconut oil to carry the strongest natural repellants known to man...

Our Lice repellent uses only the Fractionated Coconut Oil as the carrier ingredient. We don't use olive oil in lice repellent because it can feel greasy and you don't want that during the daytime. Plus coconut oil won't stain your clothes!

**Our Lice Repellant also contains ALL SEVEN of the Active Ingredients in LiceKiller PLUS we've added 2 additional insect repelling essential oils: Catnip Oil and Erigeron Oil.** These two ingredients added to already powerful formula used in LiceKiller create an environment that is REPULSIVE TO LICE, but has a pleasant aroma to humans. LiceKiller Lice Repellant will help protect you and your children from future head lice infestations.

Catnip Oil (also known for its intoxicating effects on felines) repels and even kills insects according to a study done by USDA Forest Service. In other research conducted at Iowa State University, catnip oil was **10 times more effective** at repelling mosquitoes than Deet, the insecticide compound used in most commercial bug repellants.

Erigeron oils are produced exclusively from wild growing plants. The oil is produced from the Erigeron Canadensis plant. The effectiveness of erigeron oil is evident from its commonly used nicknames of 'Fleabane' and Marestalk."

Our Lice repellent comes in a convenient purse or backpack sized bottle with a handy pump spray top for easy application.

Use our **Licekiller Lice Repellant** each time you or your children are in a high risk area for lice to keep your family happy and lice free for good.

**Directions for use: Apply a small amount to your fingertips and run fingers through hair, use a small amount behind both ears, across the nape of the neck and along the hair line of the person being treated. Only a small amount is necessary as hair may become oily if too much is applied.**
